RESTORATION REMOVAL & PREPARATION

ALLOY REMOVAL (AMALGAM)

There are three popular instruments for easy removal of old amalgam.

1558SC

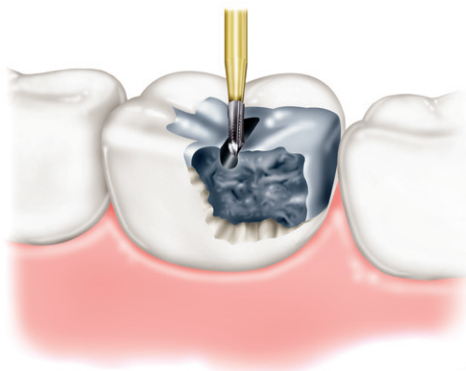

- SabreCut® Round-End Cross-Cut Fissure Premium Carbide
- Available in 10/Pk and 100/Pk (Clinic Pack)

H32

- Amalgam Removal Carbide
- Available in 5/Pk and 25/Pk

6813

- Coarse Hour Glass Diamond
- Available in 5/Pk

US No.	1558SC	—	—
Order No.	H031RS	H32	6813
Head Size (1/10 mm)	012	012	016
Cutting Length (mm)	4.0	4.2	1.85
Friction Grip			
31 - FG (19 mm)	FG	FG	FG

INTRODUCING BRASSELER'S **NEW** HANDPIECE MAINTENANCE SOLUTION...

EVERclean™

Designed with convenience in mind, the EverClean Maintenance Machine is the perfect solution for today's busy practice. Combined lubrication and purging cycles lead to a quick and easy, hassle-free maintenance that keeps your handpieces running like new. Affordable, fast, and thorough, the EverClean is the ideal maintenance solution for all your handpiece needs.

Adapters sold separately

- ▶ Complete with three ports for air or electric attachments
- ▶ Dedicated chuck cleaning station to improve bur retention
- ▶ Adapters available for most all handpieces and attachments
- ▶ Minimal clean-up required with internal oil suction feature
- ▶ A fraction of the cost of other maintenance systems

EverClean Maintenance Machine

- 3 cleaning ports
- 1 dedicated chuck cleaning station
- Oil tray and removable door shield
- 2-year warranty

Retail: \$2,199.00

Special: \$1,899.00

EverClean Spray

Retail: \$49.00

Special: \$36.75

Spray can sold separately

NEW! ENDOSEQUENCE® FLOWABLE DAM MATERIAL

Introducing EndoSequence Flowable Dam Material, a light-cure, heatless, liquid dam and block-out resin which can be applied to gingiva or tooth surfaces prior to root canal therapy, bleaching, sandblasting, or other procedures requiring intra-oral protection. EndoSequence Flowable Dam Material is provided in pre-loaded syringes and is dispensed using minimum waste precision applicator tips. Upon completion of the procedure, the flexible blue material can quickly and easily be removed with a hand instrument.

- ▶ Flowable yet stackable consistency
- ▶ Light-cures quickly and stays cool to the touch
- ▶ Flexible and tear-resistant
- ▶ Stays put while remaining easy to remove

RECIPROICATION REDEFINED...

- Reverse-cutting flute design: cuts on the counter-clockwise motion
- Compatible with EndoSync™ Plus, ProMark®, e3® and NLZ™ E electric motors
- Available in #15 (Scout), #25, #30, #40 and #50
- Heat treated NiTi allows for pre-bending
- Constant taper design
- Sterile blister packs of three instruments

STERILE R

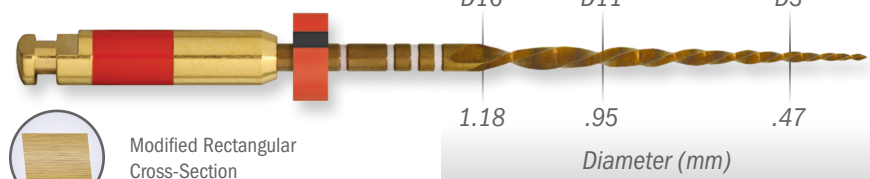

ESR™ CM VS. WAVEONE® GOLD

- ESR CM features a similar but more flexible flute design*

**63% of evaluators noted that ESR CM is more flexible than WaveOne Gold in an internal clinical survey.*

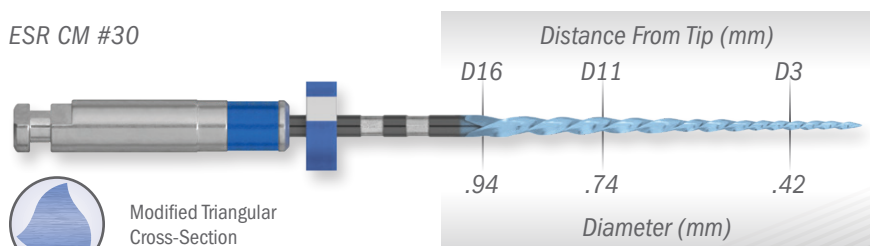

- ESR CM features a size #30 which is less invasive than the WaveOne® Gold primary file
- ESR CM can be autoclaved if sterility is compromised
- ESR CM features a novel safety tip optimized for reciprocation

WaveOne® Gold #25 Primary

Modified Rectangular Cross-Section

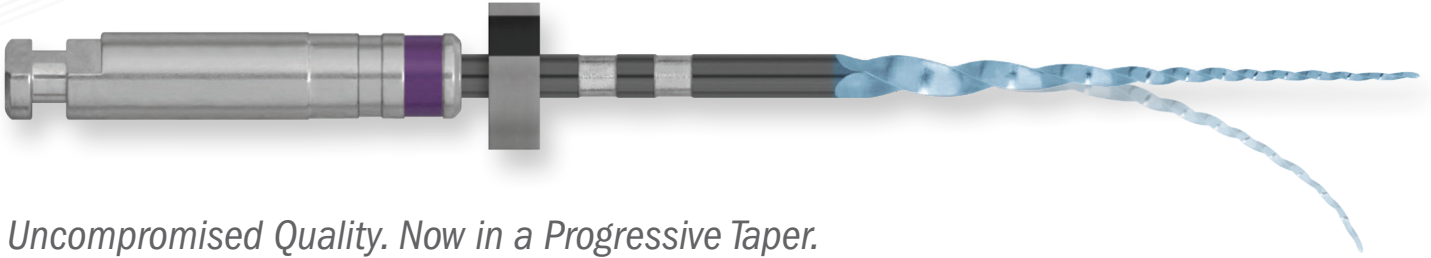

ESR CM #30

Modified Triangular Cross-Section

NEW! ENDOSEQUENCE® BC TEMP™

BC Temp is a premixed bioceramic paste for intracanal dressing. Unlike traditional Calcium Hydroxide pastes, the primary components of BC Temp are Calcium Silicates and Calcium Oxide which combine with the water naturally present in dentin to produce Calcium Hydroxide which dissociates into Ca^{2+} and OH^- . The hydroxyl ions (OH^-) released are responsible for a significant increase in the pH of the surrounding tissues, making the environment unsuitable for bacterial growth. The hydration reaction of Calcium Silicates allows BC Temp to have a gradual and slow release of calcium and hydroxyl ions which eliminates the need for frequent applications.

BC Temp is highly radiopaque (>9mm) and utilizes Calcium Tungstate as a radiopacifier so it is non staining and unlike conventional Calcium Hydroxide materials, BC Temp is easily removed which reduces chair time.

- ▶ Single or Less Frequent Application
- ▶ Highly Biocompatible
- ▶ Optimal pH
- ▶ Easily Removed
- ▶ High Radiopacity
- ▶ Non-staining
- ▶ Optimal flow – $23,85 \pm 0,33$ mm
