

Post/Core and Ceramic Crowns

The Best Outcome for Endo Teeth

Course Description:

So, you're faced with a fractured post/endo tooth. It is certainly better to keep the tooth/root vs. other treatment modalities. During that same appointment you can place a post/core, prep the tooth, take a final impression, and place a provisional crown. No waiting for healing and temporary appliances. In a short time, you have an all ceramic crown to place. The patient will be amazed and the outcome will be enviable.

Course Objectives:

1. Review options of dental materials to place post/cores, crowns and clinical parameters.
2. Appreciate the use of fiber posts, composite cores and adhesive dentistry.
3. Understand armamentarium, curing lights, impression materials and luting agents to use.
4. Tying it all together with all ceramic crowns and the big advantages for your patient and practice.

Audience:

Primarily dentists and dental assistants.
