# New Subgingival Trimmers and Finishers!

Subgingival FitStrips are perfectly designed to remove composite overhangs and excess cement quickly and safely from hard-to-reach subgingival areas. These strips are 33% more narrow at only 2.5 mm in height versus standard FitStrips, and with their center, non-abrasive Safety Zone, slip easily between teeth and below the contact area. The medium, fine and super fine durable diamond coating makes quick work of the cleanup and provides a silky-smooth finish.

#### One handy handle!

FitStrip's simple, attachable handle makes a world of difference for both clinician ease-of-use and patient comfort.

#### Ready for a marathon!

FitStrips are very durable and long lasting. They stay sharp and ready to go even after multiple autoclave cycles.

#### Starts bold — finishes clean

1. Medium grit for fast removal
2. Fine grit smooths things out
3. Super fine strips put the perfect finishing touch on things

#### Narrow focus

- 33% more narrow than standard FitStrips
- Only 2.5 mm in height

#### Stay in the zone

- Non-abrasive Safety Zone protects contact area
- Super-thin – only 0.05 mm!
- Slips easily and safely between teeth

## Simple Subgingival Technique:

1. Slide between teeth. Starting with the medium grit (blue), twist the colored barrel until the strip is locked straight. Position the Safety Zone in the affected interproximal space. With gentle apical pressure and a slight back-and-forth motion, slide the strip between the teeth\*. The barrel may be twisted into a curved position at this time to allow the strip to follow the natural tooth contours.
2. Remove the overhang/excess cement. Move Fitstrip™ in a gentle buccal-lingual back-and-forth motion. Remove FitStrip™ and test the area with floss to ensure the desired result. Repeat as necessary.
3. Finish and polish. Place the fine grit FitStrip™ (red) into the interproximal space using the method in step one. Move it in a gentle buccal-lingual back-and-forth motion three or four times. Remove the fine strip and repeat the process with the super fine (yellow) for an ideal polish.

\*If the teeth are bonded together or the contact is too tight to get the 0.05 mm Safety Zone between the teeth, use the FitStrip™ serrated saw (gray barrel) first to gain access.
